

TRUSTED ANIMAL INTELLIGENCE

Know what is true. See what changed. Make the next decision with confidence.

AnimalTrace turns fragmented identity, DNA, health, pedigree, laboratory, and registry records into living evidence that stays useful, reviewable, shareable, and current.

EVIDENCE

Important claims stay tied to their source.

REVIEW

AI proposes; people confirm where it matters.

SHARING

Each recipient gets a purpose-specific view.

AUTHORITY

Labs and registries keep their official roles.

THE PROBLEM

An animal's history should not be trapped in disconnected files and portals.

A laboratory holds one result. A registry holds identity and pedigree. A veterinarian holds a clearance. An owner has PDFs and email. AnimalTrace connects the evidence without pretending those sources are interchangeable.

START WITH WHAT ALREADY EXISTS

Report rescue for AnimalTrace client accounts

1 • Upload

Add supported DNA, health, pedigree, or registry documents.

2 • Preserve

Keep the original file, issuer, dates, and source context.

3 • Review

Confirm uncertain identity, wording, and proposed findings.

4 • Use

Organize the evidence around the animal and the next decision.

ONE PLATFORM

Four things the living record makes possible

Living animal record

Bring identity, DNA, health, pedigree, source documents, decisions, and changes into one reviewable record.

Animal Passport

Create audience-specific evidence views for buyers, veterinarians, registries, and trusted collaborators.

AnimalTrace Intelligence

See what changed, what supported records or decisions may be affected, and what action comes next.

Genetics and breeding

Use supported evidence for recessive-risk analysis, pedigree COI, and explainable mate recommendations.

ADAPTED TO THE JOB

Useful to owners and the organizations that serve them

Owners & breeders

Rescue old reports, see evidence gaps, monitor change, compare supported decisions, and share the right proof.

Registries & associations

Reconcile cross-source submissions and preserve a defensible review trail while remaining the official authority.

DNA testing labs

Connect issued results or run governed animal-DNA workflows while remaining the issuing authority.

Client Free and Client Pro include report rescue.

Client Free provides a real animal record and 10 one-time report-rescue starter pages. Client Pro adds 50 extraction pages each month, continuous intelligence, advanced decision tools, and Animal Passport issuance. Organization work begins with a defined workflow review.
