

PRACTICAL GUIDE FOR CLIENT ACCOUNTS

Rescue the reports you already have. Keep the source. Build the record.

Report rescue turns supported DNA reports, health clearances, pedigrees, and registry documents into proposed, reviewable facts attached to an animal record.

BEFORE YOU UPLOAD

Choose the clearest source document you have

DNA reports

Issued results, health variants, traits, panels, and identifiers.

Health clearances

Status, date, source, validity, and supporting context.

Pedigrees

Named parents, family claims, and traceable identifiers.

Registry records

Registration, identity, ownership, and eligibility evidence.

THE WORKFLOW

Four steps from disconnected file to usable evidence

01

Open the animal

Create or select the correct animal record before attaching the file.

02

Upload the source

Use the original PDF or image when possible; avoid cropped screenshots.

03

Review findings

Check identity, issuer, dates, units, wording, and low-confidence fields.

04

Confirm or correct

Accept supported facts, correct uncertainty, and keep the source attached.

WHAT GOOD REVIEW LOOKS LIKE

Pause when the document and animal do not clearly match

Confirm before accepting

- Animal name plus a durable identifier
- Issuing laboratory, registry, or professional
- Collection, issue, or effective date
- Exact result wording, units, and status

Do not guess

- Do not merge similar names without supporting identity
- Do not turn an interpretation into an issued fact
- Do not hide conflicts between two sources
- Keep uncertain information pending review

INCLUDED CLIENT CAPACITY

Start free; add monthly capacity when the record keeps growing

Client Free

Up to five animals and **10 one-time AI extraction starter pages**. Starter pages do not renew monthly.

Report rescue included

Client Pro

Up to 100 animals and **50 AI extraction pages each month**, plus continuous intelligence, watches, decision tools, and Passport issuance.

Credit packs available

Important boundary: AnimalTrace organizes and helps review evidence; it does not replace the issuing laboratory, registry, veterinarian, or other authoritative source. AI-proposed information should be checked before confirmation.
